SAJCN

Jul./Aug. 2004, Vol. 17, No. 2

74

Every time I sit to type a letter for the *Journal*, my thoughts are about **time!** The realisation that another 3 months have passed so quickly is unnerving.

Which brings me to the issue of the International Nutrition Congress. You should have received an information booklet, detailing a full and exciting programme. Do not miss the early registration date.

Many thanks to Dr R Blaauw and Ms J Downs who have put many working hours into various committees. If you have not received a booklet, contact:

R Louw: secretariat@ebsconsulting.co.za; or go online:

<http://www.puk.ac.za/iuns>

I have recently received the end-of-year financial statement (2003/2004) and am pleased to note that membership has increased – thanks to your loyal support!

Tracey Moore

Addressing hospital malnutrition

Since the plight of the malnourished hospitalised patient was highlighted 30 or so years ago, continuing emerging evidence indicates that malnutrition among hospitalised patients remains unacceptably high and impacts adversely on clinical outcomes.

Recently, the Council of Europe (the Committee of Experts on Nutrition, Food Safety and Consumer Health of the Partial Agreement in the Social and Public Health Field) collected information regarding nutrition programmes in hospitals, and established a European network consisting of national experts from the Partial Agreement member states, which is chaired by Denmark. The Network identified the following contributing factors to the prevalence of malnutrition:

- Lack of clearly defined responsibilities in planning and managing nutritional care
- Lack of sufficient educational level with regard to nutrition among all staff groups
- Lack of influence and knowledge of the patients
- Lack of co-operation between different staff groups
- Lack of involvement from the hospital management.

A number of recommendations have been made which have been approved for implementation. For further information:

The Illustrated History of Medicine

Professor Jean-Charles Sournia

ISBN 1 872457 05 3

Size: 246mm x 326mm • Hardbound and jacketed

600 pages, 700 illustrations

"This book will make a magnificent gift to delight anyone who is interested in medicine or history or even just a beautiful production... A book of rare quality."

GERARD LAMBERT, CARDIO HEBDO

"Without doubt, Professor Sournia's magnificent work will make both doctors and students assume a measure of modesty in the light of the debt they owe to their predecessors."

DR B LALARDRIE, IMPACT MEDICIN

"Thanks to a compelling text and a wealth of illustrations...we travel through the ages – from the first steps of medical science down to our own day."

JEAN-MICHEL LARDRY, KINESITHERAPE SCIENTIFIQUE

"Enthralling, comprehensive, clear and richly illustrated: a book to present to every aspiring doctor."

JACQUES NERSON, LE FIGARO MAGAZINE
